COMPETENCY-BASED CURRICULUM • COMMON COMPETENCIES

Module 5: Applying Quality Standards

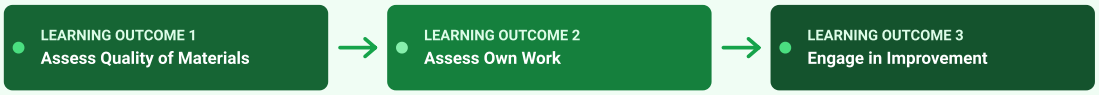

Unit of Competency: Apply Quality Standards • TESDA-OP CO-01-F11 Standardized Delivery

COURSE PROGRAM	NOMINAL DURATION	QUALIFICATION LEVEL	DOCUMENT TRACKING
Basic Computer Literacy	2.0 Hours	Diploma / NC Level	CBC-MOD-05-REV01

Module Descriptor & Scope

Unit Overview

This module covers the knowledge, practical skills, attitudes, and values required to apply quality standards systematically within the workplace. It guides trainees through inspecting and verifying received materials, monitoring and assessing personal work against established criteria, resolving non-conformances, and participating proactively in institutional quality improvement cycles aligned with occupational safety, enterprise operating regulations, and customer satisfaction parameters.

STANDARD PROGRESSION: RECEIVING • INTERNAL SELF-AUDIT • CONTINUOUS IMPROVEMENT

Summary of Learning Outcomes

Curriculum Matrix

Code	Learning Outcome Statement	Core Underpinning Focus	Nominal Hours
L.O. 1	**Assess quality of received materials**	Fault isolation, work instructions, compliance verification	0.75 Hour
L.O. 2	**Assess own work**	Self-monitoring, variance logging, documentation fidelity	0.75 Hour
L.O. 3	**Engage in quality improvement**	Process analysis, customer alignment, PDCA implementation	0.50 Hour

Enterprise Quality Principle

"Quality is not an isolated inspection event; it is an end-to-end discipline governing incoming stock, active workflow execution, and iterative operational improvement to eliminate waste and guarantee customer satisfaction."

Learning Outcome 1: Assess Quality of Received Materials

LO 1 • 0.75 Hour

Assessment Criteria	Contents & Knowledge	Training Conditions	Methodologies	Assessment
1.1. Work instructions obtained and carried out in accordance with standard operating procedures (SOP).	• Technical reading skills for work instruction • Workplace standards and specifications	**Provided to trainees:** • Enterprise SOP manuals • Manufacturer service manuals • Work orders & forms • Sample hardware / media • Job specification sheets • Non-conformance logbook	• Lecture-demonstration • Self-paced learning guide • Small group discussion • Practical bench simulation • Case fault examination	• Direct observation • Hands-on demonstration • Practical exam • Oral questioning & interview • Written assessment
1.2. Received materials checked against workplace standards, purchase orders, and specifications.	• Material intake verification • Quality checking procedures • Environmental safety protocols			
1.3. Faulty materials isolated and segregated safely from serviceable hardware to prevent contamination.	• Defect categorization • Quarantine / isolation protocols • Handling fragile components			
1.4. Causes of faults recorded and reported to designated supervisors per defined documentation channels.	• Fault identification & root-cause logging • Chain-of-custody reporting forms • Standard communication lines			
1.5. Faulty items replaced or returned following approved inventory replacement procedures.	• RMA & replacement policies • Vendor warranty guidelines • Record reconciliation			

Standard Operating Protocol: Incoming Inspection Checklist

Field Job Aid

Phase A: Verification

- Cross-reference delivery receipt against purchase orders.
- Inspect packaging for seal tampering, water ingress, or impact crushing.
- Confirm part/model numbers against procurement specs.

Phase B: Bench Test

- Perform physical count and spot measurement.
- Check electrostatic discharge (ESD) packaging for PC parts.
- Validate hardware revision and baseline boot viability.

Phase C: Disposition

- Accept compliant items into active inventory.
- Affix physical *RED TAG* to defective units.
- File discrepancy report with supervisor within 2 hours.

Learning Outcome 2: Assess Own Work

LO 2 • 0.75 Hour

Assessment Criteria	Contents & Knowledge	Training Conditions	Methodologies	Assessment
2.1. Quality documentation within the enterprise is correctly identified, referenced, and implemented.	• Enterprise quality policies • Job procedures & checklists • Technical style guidelines	**Provided to trainees:** • Standard operating guidelines • Customer criteria checklists • Self-audit scorecards • Sample deliverable templates • Deviation recording logsheets • Peer review rubrics	• Guided lecture & demo • Individual self-assessment • Peer-review sessions • Interactive case reviews • Guided simulation drills	• Hands-on skill demo • Direct observation • Portfolio audit • Structured interview • Performance examination
2.2. Completed work checked against technical standards, speed benchmarks, and user requirements.	• Performance threshold metrics • Accuracy standards • Validation techniques			
2.3. Task errors identified, isolated, and flagged before releasing output to downstream stages.	• Defect containment methods • Deviation tolerance thresholds • Early detection practices			
2.4. Production indicators and quality metrics recorded systematically per enterprise reporting procedures.	• Quality logging and registers • Performance indicators (KPIs) • Defect tracking parameters			
2.5. Root causes documented and escalated in accordance with standard operating procedures.	• Root-cause analysis (5 Whys) • Escalation workflows • Corrective action reporting			

Trainee Self-Inspection Framework: The 4-Tier Verification

Quality Practice

1. Conformance to Specifications

Does the completed task strictly fulfill the parameters specified in the work order? Verify layout, dimensions, system settings, naming rules, and file formatting before submission.

2. Error Isolation & Correction

Never allow an unverified deliverable to reach the client or next workstation. When an anomaly is discovered, segregate the artifact immediately and apply approved corrective fixes.

3. Documentation Fidelity

Every error, deviation, or rework cycle must be inscribed clearly in the operator logbook. Traceability preserves accountability and prevents identical systemic faults in future runs.

4. Escalation Compliance

When variances fall outside standard tolerance, initiate rapid escalation to the designated workshop supervisor. Do not attempt unapproved workarounds that compromise safety or specs.

Learning Outcome 3: Engage in Quality Improvement

LO 3 • 0.50 Hour

Assessment Criteria	Contents & Knowledge	Training Conditions	Methodologies	Assessment
3.1. Process improvement initiatives actively participated in within the scope of assigned workplace operations.	• Quality improvement cycles • Process mapping & analysis • Critical thinking principles	**Provided to trainees:** • Continuous improvement tools • Customer feedback surveys • Kaizen suggestion sheets • Environmental safety guidelines • Production metrics records	• Interactive lecture • Kaizen case workshops • Group brain-storming • Guided process re-design • Problem-solving drill	• Direct observation • Practical presentation • Portfolio review • Oral questioning • Written evaluation
3.2. Work carried out in compliance with modified and approved process improvement protocols.	• Standardized workflow adoption • Safety and environmental controls • Change management basics			
3.3. Quality of product / service monitored systematically to ensure total customer satisfaction.	• Customer service metrics • Service level agreements (SLA) • Feedback loops and remediation			

DEMING PDCA FRAMEWORK: CONTINUOUS OPERATIONAL QUALITY CYCLE
